Neutralize Ammonia
Less Odor Means Fewer Flies
Save up to 50% on Bedding Costs

Keep your Calving, Foaling Stalls & Pens
Clean, Dry and Ammonia Free with Stall DRY

Superior Absorbency & Odor Control

OMRI
Listed

An all-natural product made from a unique blend of diatomaceous earth and montmorillonite clay.

Neutralizes ammonia and absorbs moisture and provides 3 times the coverage of hydrated lime.

Reduces bedding costs by extending the life of the bedding and saves labour.

Deodorizes, sanitizes and leaves a fresh scent, creating a healthier and drier environment for your animals.

Non-toxic, non-caustic, safe to use.

Use in stalls, barns and trailers.

An all natural, no risk solution for your pets needs.

AMMONIA BULLETIN

LIME DOES NOT CONTROL AMMONIA

Hydrated lime Creates **STRONGER** Ammonia Gas when in contact with **URINE**

WHY?

Urine contains an unstable molecule (NH₂). Lime and bacteria force the NH₂ molecule to pick up another Hydrogen atom. NH₂ becomes NH₃ - which is ammonia gas

STOP USING HYDRATED LIME!!!

DO NOT use Hydrated Lime for ammonia control - it increases ammonia gas. Hydrated Lime is caustic-burns animals' lungs and inflames cuts. Hydrated Lime is corrosive to stall equipment and most metals.

AMMONIA SOLUTION:

Stall DRY

- Absorbs its weight in liquid
- Extends the life of bedding
- Neutralizes ammonia
- Inhibits bacteria growth

Stall DRY, an all-natural product made from a unique blend of diatomaceous earth and montmorillonite clay.

Creates a healthier, drier environment for your animals!

PRODUCT COMPARISON

Stall DRY (used as directed) will:

- Neutralize ammonia with a pH of <6.
- Extend the life of bedding.
- Control flies.
- Absorbs 140% of its own weight in liquid repeatedly.
- Create a drier, healthier environment for animals.
- Eliminates odors.
- All natural, safe and non-caustic.
- One 44 lb bag covers 1,000 sq. ft or 6 (x) more coverage than a zeolite based product
- Costs less than 50 cents a day.

Remember to also add some Stall DRY to your manure prior to dumping it as it reduces the odour of the manure while binding nitrogen and phosphorous that plants thrive on. This gives you a more compost able drier product for spreading in your garden.

Zeolite Type Products

- Zeolite product that during initially removes odors from the air quickly.
- Longer term ammonia absorption diminishes.
- Covers 150 sq. ft.
- Liquid absorption is about 55% of its weight.
- Fly control is in direct proportion to liquid absorption & odor control.

Stable Boy (used as directed)

- Creates merely a leach field with the liquid and ammonia settling to the bottom.
- Liquids are poorly absorbed.
- Compacts into a hard concrete like base that is difficult to clean out of stalls.
- There is no natural fly control.
- (1) Bag covers 150 sq. ft.
- Very limited distribution.

Hydrated Lime (used as directed)

- Wear mask and gloves during installation.
- When animal urinates on it actually creates more ammonia.
- Highly caustic, burns & hurts open wounds.
- Takes 3+ bags to absorb what (1) bag of Stall DRY will.

Barn or Garden Lime (used as directed)

- Merely cosmetic does nothing for absorption or ammonia control.

INSTRUCTIONS

Stall DRY is composed of a natural blend of Diatomaceous Earth and clay in a granular form, which has the ability to neutralize ammonia and absorb odors and moisture. Stall DRY leaves your stall, barn, cage, trailer or pen smelling fresh.

Stall DRY is safe to use on all types of surfaces, dirt, wood, concrete, metal or rubber mats, because it is non-caustic and non-toxic. **Stall DRY** when used daily can improve the environment you animals live in, by reducing ammonia, odors and moisture, in addition, it can reduce your bedding costs along with labor to clean out your stalls.

Application instructions:

Apply approximately 4-5# over the entire surface of your 10'x10' stall

Place your bedding over the **Stall DRY** (use whatever bedding you normally use)

When you first go into your stall apply 1/2-1# of Stall DRY over the wet bedding only, then go pick out the manure.

When you are ready to leave the stall, take a few seconds and with your muck fork toss the bedding where you applied **Stall DRY**. This will allow the **Stall DRY** to come in contact with the urine and will neutralize the ammonia and begin to dry the wet bedding. Thus extending the life of your bedding.

Rubber Mat Application:

Apply approximately 4-5# over the entire surface of the mats.

Then apply a small amount along the edges and seams of the mats, this will prevent the urine from seeping under the mats and creating an ammonia odor you can't get to unless you take the mats up. If you want, when you take the mats up, apply 6-8# under the mats and then follow the instructions for Rubber mat application.

This will keep your stalls and mats odor free and extend the life of the mats as well.

Place bedding over the **Stall DRY**

Daily apply 1/2-1# of **Stall DRY** over the wet bedding and then pick the manure out.

When you are ready to leave, toss the wet bedding with the Stall DRY and go to your next stall. This allows the **Stall DRY** to dry the wet bedding, while at the same time neutralize the ammonia in the bedding.

Manure application:

Every 2-3 days sprinkle 1-2# of **Stall DRY** over the manure pile (either in the spreader or the pile) this will control the odors, speed up the composting, bind the nutrients in the manure and allow you to use your manure in you fields, gardens or wherever you use it in a safe and environmentally safe manner.

Other Uses:

Stall DRY can be used in Rabbit pans, cat litter boxes, as a oil absorbent on you driveway or any other application where you have odors or wetness. It can be sprinkled on carpet (when you cat or dog has an accident), in the basement for that mildew, musty smell or if you spill something that smells, it will absorb it quickly and take the odor away.
